Bengaluru, Karnataka

SUMMARY

Data Science undergraduate focused on machine learning and end-to-end ML systems — from modeling and explainability through to secured API deployment. Experienced building AI-driven applications and production-style data solutions, and applying analytical and engineering skills to real-world problems.

EDUCATION

B.E. — Data Science

Expected 2028

Bangalore Institute of Technology, Bengaluru

Relevant coursework: Data Structures & Algorithms, DBMS, Machine Learning, Artificial Intelligence, Data Analytics, Operating Systems

PROJECTS

Credit Default Risk Prediction System

Flagship · End-to-end ML

Python · LightGBM · SHAP · FastAPI · Docker · AWS EC2 · Nginx · MongoDB

- Engineered 1,000+ features across 7 relational tables of the Home Credit dataset; trained a LightGBM model reaching 0.79 ROC-AUC, independently validated on the Kaggle private leaderboard (0.781) — confirming no data leakage.
- Added SHAP explainability returning ranked, human-readable risk drivers with every prediction, plus a recall-tuned decision threshold reflecting the cost asymmetry of missed defaults.
- Deployed as a secured REST API (FastAPI, Docker) on AWS EC2 behind Nginx with Cloudflare HTTPS, JWT authentication, and rate limiting; logged predictions to MongoDB Atlas with PII-minimized audit records.
- Built an interactive dashboard for live risk assessment, SHAP visualization, and prediction history.

[Live demo](#) · [GitHub](#)

ScamShield AI — Scam Detection

Python · Scikit-Learn · NLP · Streamlit

- Built an NLP classifier to flag suspicious messages and emails with risk-score output and supporting reasons, served through a real-time Streamlit interface.

Currency Exchange Web Application

React · API Integration · CSS

- Responsive app for real-time currency conversion and exchange-rate tracking via external APIs.

Library Management System

MySQL · SQL

- Designed relational schema for inventory, members, and issue/return tracking with normalized tables.

SKILLS

DATA SCIENCE & ML

Pandas

NumPy

Scikit-Learn

LightGBM

SHAP

TensorFlow

Matplotlib

LANGUAGES

Python

SQL

C

JavaScript

TypeScript

WEB & API

FastAPI

React

Next.js

Node.js

Tailwind

Streamlit

DATABASES

MySQL

MongoDB

SQL Server

TOOLS & DEPLOYMENT

Docker

AWS EC2

Nginx

Git

Vercel

Linux

VS Code

CERTIFICATIONS

- Python Programming
- Data Science Fundamentals
- Machine Learning Basics
- SQL & Database Management

KEY ACHIEVEMENTS

- Deployed an explainable ML model as a secured, externally-validated API (0.78 ROC-AUC on Kaggle).
- Shipped end-to-end projects spanning ML, full-stack, and database work.
- Active GitHub contributor with hands-on, project-based learning.
- Practiced Data Structures & Algorithms on competitive platforms.
